Integration made easy

Whether you choose to label or barcode, we have the right solution to complement your business through our fully-tracked, high speed systems. There are nine available solutions, so lets get your e-Commerce business moving.

secured mail — *we deliver*

VISION
Barcode recognition, our most popular choice and proudly designed by us

If your parcel or large letter carries a barcode we can sort it. Provide us with a PAN data file or a pre advice file, linked to your barcode. We'll reference your barcode and sort the item to its destination. You can track your item seamlessly as it flows through our system. Don't forget to include the Secured Mail indicia.

Metapack

We are fully integrated with Metapack, if you are shipping with Metapack simply choose Secured Mail in your carrier set up, this allows more flexibility enabling an analogous 48hr product offering, with seamless tracking into Royal Mail's network.

AS2 & EDI
interfaces – great for multi-national operators and large organisations

Being a carrier for many large organisations an AS2 coupled with EDI interface is active and can assist in pre shipment information. It will require EDI programming to European standards. You will have access to real time tracking and scanning results.

Simple Merchant

A label and pick list can be printed that give unique tracking information that's accessible for you and your clients using our Tracking widget, all tracked solutions are available to view in the user dashboard.

Web Services

If you are technology enabled you can request your labels through our Web Services interface, either per item or as a bulk upload, the Name and address, plus weight or format is passed via a Web Services call using SOAP or Restful interfaces. We return a complete DSA compliant shipping label or just the barcode you are required to print as code or as an image.
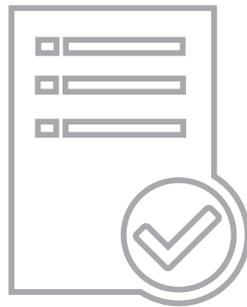

Linnworks

Using the Bespoke Carrier export settings, set up a new Velocity shipping profile and your orders will export along with all your internal information, this can be rapidly uploaded into our CSV shipping tool.
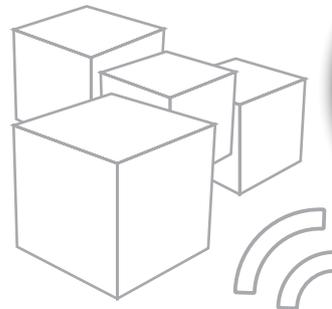

Manual Over Labelling Stations

If you are a smaller volume shipper then a manual solution maybe the way to go. We provide USB scales, a PC and a printer. This generates a shipping label with barcode that we can scan giving you valuable tracking information.

CSV Uploader
A helping hand

If your addressing information can be exported to a CSV file with a format flag of F= Large letter and P= Parcel plus an agreed or accurate weight. This will generate a shipping label on a Label stock and Zebra printer which we provide free of charge.

Automated DWS

An automated process using OCR and inline scales that will take a mixture of your packets and large letters and label them with our routing. By identifying weights and dimensions the system will identify your packets from large letters, label them and pass them through the correct stream.
